

Use case	Account management	
Release (id)	UC-10, v1.0, 7 May 2026	
Context of Use	A registered user needs to change their password for security or recover it because he forgot it; or wants to delete their account because he doesn't need it anymore.	
Scope	Allow registered user to change/recover his password or delete his account.	
Level	Summary / Primary task	
Primary actor	Registered User	
StakeHolder & interest	StakeHolder	Interest
	Registered Passenger	Wants to change/recover the password or delete the account.
	Customer Support	Involved in recovery of lost passwords (FR30).
	System Administrator	Needs to ensure data is forgotten after deletion (FR27)
Preconditions	→ For password change/account deletion: user is authenticated (UC2) → For password recovery: user has an existing account but cannot access to it	
Minimal Guarantees	→ User data remains safe → Deletion requests are processed according to privacy standards	
Success Guarantees	→ Password is successfully updated or the account and all associated registration data are removed	
Trigger	User selects "Change Password", "Recover Password", or "Delete Account".	
Description (Main Success Scenario)	Step	Action
	1	User accesses the Account Management section.
	2	To Change Password (FR29): User enters current password and provides a new one. System updates the account.
	3	To Delete Account (FR27): User selects "Eliminate Account". System requests final confirmation.
	4	System deletes the account and all data provided during registration (FR12).
Extension	Step	Other action
	1a	Forgot Password (FR30): User is not logged in. User selects "Recover Password" and contacts Customer Support.
	1b	Customer support verifies User Identity and assists him in the recovery/reset process.
	3a	Active Bookings: If the user has active tickets, the system warns him that deleting the account will invalidate access to them.
Technology & data Variations	Data Privacy: Account Elimination (FR27) must trigger a "hard delete" of all registration data to comply with NFR23. Security Support: Password recovery via Customer Support (FR30) requires a verified manual workflow (e.g. identity check) before a reset link or temporary password is provided. Constraints: Password changes must adhere to the complexity rules defined in the system's security non-functional requirements.
