

Use case	Customer support	
Release (id)	UC-11, v1.0, 7 May 2026	
Context of Use	A registered user or an inspector needs to contact Customer Support to request a Refund due to service issues, cancellations or ticket errors.	
Scope	Allow registered user or ticket inspector to contact customer support.	
Level	Subfunction / Primary Task	
Primary actor	Registered user, Inspector	
StakeHolder & interest	StakeHolder	Interest
	Registered user	Wants to recover funds for unused or problematic services.
	Ticket Inspector	Needs to authorize or initiate refunds on behalf of passengers in case of on-site issues.
	Customer Service Agent	Needs to have a clear data of the situation to process refunds or requests efficiently.
Preconditions	→ The user or inspector is authenticated (UC2) → A valid transaction or ticket exists to be refunded	
Minimal Guarantees	→ The request is logged and assigned a tracking ID → The user receives confirmation that the request was sent	
Success Guarantees	→ A refund request form is successfully submitted to the Customer Service department.	
Trigger	User selects the “Contact Customer Service” or “Request Refund” option.	
Description (Main Success Scenario)	Step	Action
	1	User navigates to the Customer Service contact section.
	2	System presents a specialized contact form (FR 22).
	3	User selects the ticket/transaction in question and specifies the type of refund (Partial or Full).
	4	User provides necessary details or justifications for the request and submits the form.
	5	System validates the form and forwards the request to the Support Queue.
Extension	Step	Other action
	3a	Inspector Submission: If the actor is an Inspector, the form may include additional fields for "Incident Reports" or "Authorization Codes."
	5a	Incomplete Data: If required fields are missing, the system highlights errors and prevents submission until corrected.
Technology & data Variations	Form Logic: The form must include a toggle or dropdown to distinguish between Partial and Full refund requests. Traceability: Following OB 7, every form submission must be linked to a specific user ID and Ticket ID for audit purposes. Workflow: The "Contact Customer Service" form is the primary interface for triggering the back-end refund processing workflow.
