

Use case	Inspector Operations Management	
Release (id)	UC-12, v1.0, 26 April 2026	
Context of Use	Ticket inspectors use the system during his shift to validate tickets (FR24) and monitor occupancy (FR26).	
Scope	Allow ticket inspectors to perform activities like ticket validation (FR24) and occupancy tracking (FR26).	
Level	Primary task	
Primary actor	Ticket Inspector	
StakeHolder & interest	StakeHolder	Interest
	Ticket Inspector	Needs to validate tickets and manage passengers occupancy
	Railway administrator	Needs accurate validation and occupancy data for operational insights and to avoid profit loss
	User	Wants to see how much is the train crowded
Preconditions	→ The inspector is authenticated → The system is connected to the ticket database → The inspector is assigned to a shift	
Minimal Guarantees	→ The system remains operational even if a validation fails → Incorrect validation is not recorded	
Success Guarantees	→ Tickets/subscriptions are correctly validated → Occupancy data is updated	
Trigger	The inspector starts their shift and accesses the inspector interface, selecting “ <i>Validate Ticket/Subscription</i> ” or “ <i>Track occupancy</i> ”	
Description (Main Success Scenario)	Step	Action
	1	The inspector accesses the system
	2	The system displays the inspector dashboard
	3	The inspector selects “ <i>Ticket Validation</i> ”
	4	The system requests ticket/subscription data
	5	The inspector scans or inputs the ticket
	6	The system validates the ticket/subscription and prompts “ <i>Ticket Correctly Validated</i> ”
	7	The system updates seat occupancy accordingly
	8	The inspector optionally selects the “ <i>Track occupancy</i> ” section
	9	The system requests which coach/seats are occupied
	10	The system updates seat occupancy accordingly
Extension	Step	Other action
	5a	If scanning fails the inspector is asked manually inputs ticket data
	6a	If the ticket is invalid the system outputs “ <i>Invalid Ticket</i> ”
	6b	If the ticket has already been validated the system warns about duplicate validation printing “ <i>Already Validated</i> ”
	7a-10a	If occupancy update fails the system logs the issue, shows an error and continues
Technology & data Variations	→ If the inspector uses a <u>scanner device</u> , ticket data is automatically readed → If the system is offline, validations are stored locally and synchronized later
