

Use case	Statistics Visualization	
Release (id)	UC-14, v1.0, 26 April 2026	
Context of Use	Railway administrator access analytical data to monitor performance and support decision making (FR32).	
Scope	Allow administrator to visualize insights on the system like revenue, route frequency ecc (FR32).	
Level	Primary task	
Primary actor	System administrator	
StakeHolder & interest	StakeHolder	Interest
	System administrator	Needs accurate and clear statistics to support business decision
Preconditions	→ The administrator is authenticated → Data is available in the system database	
Minimal Guarantees	→ The system does not show wrong data → Database is populated with statistical data	
Success Guarantees	→ The administrator successfully visualizes the statistics requested through graphs, tables ecc... → Data is accurate and up-to-date	
Trigger	The administrator selects the “ <i>View Statistics</i> ” button	
Description (Main Success Scenario)	Step	Action
	1	The administrator selects the “ <i>View Statistics</i> ” button
	2	The system request the type of statistics (i.e. revenue, route frequency)
	3	The administrator selects the desired statistics
	4	The system retrieves the relevant data and processes it
	5	The system displays the statistics in visual form (charts/graphs)
	6	The administrator analyzes the displayed data
Extension	Step	Other action
	3a	If no type is selected the system prompts the administrator “ <i>Please choose at least one type</i> ”
	4a	If data is unavailable the system shows “ <i>No data available</i> ”
	4b	If data retrieval fails the system shows “ <i>Error while retrieving the data</i> ”
	5a	If data volume is too large the system asks for filters (i.e. date range)
Technology & data Variations	If the administrator selects a <u>date range</u> , <u>specific route</u> or <u>real time data</u> , the system retrieves only data within those filters
