

Use case	Purchase of a ticket or subscription.	
Release (id)	UC- 04, v1.0, 26 April 2026	
Context of Use	A registered user is able to select a ticket, to add optional services and to pay for it.	
Scope	Allow registered users to securely process payments for tickets or subscriptions and add optional services (like seat selection, luggage storage, or bike spaces) to their booking.	
Level	Primary task	
Primary actor	Registered user	
StakeHolder & interest	StakeHolder	Interest
	Registered user	Stakeholder specific interests
	Payment System	Stakeholder specific interests
	Database	Needs to be updated with all the info about the new purchase
Preconditions	→ The user is authenticated (UC2) and has searched/selected a train (UC1).	
Minimal Guarantees	→ If the payment is declined, no ticket will be issued and no funds are taken from the user.	
Success Guarantees	→ The payment is accepted, the ticket/subscription is generated and all the services required are successfully reserved.	
Trigger	The user clicks the 'Proceed to checkout' button after selecting a train.	
Description (Main Success Scenario)	Step	Action
	1	User selects optional add-ons (seat selection, luggage storage, bike wagon, travel companions).
	2	System calculates the total price and displays a summary.
	3	User confirms and selects a payment method.
	4	System communicates with the external Payment System to authorize the transaction.
	5	Payment System confirms the successful transaction.
	6	System generates the ticket, updates the Ticket Database, and confirms the purchase to the user.
Extension	Step	Other action
	4a	The Payment System declines the transaction.
	4a ₁	System displays a "Payment Failed" error.
	4a ₂	System prompts the user to select an alternative payment method.
Technology & data Variations	External Payment API integration (e.g., Stripe, PayPal, Apple Pay) is required.
