

Use case	Boards Visualization	
Release (id)	UC-06, v1.0, 26 April 2026	
Context of Use	A user (e.g., physically at the station or heading there) needs to quickly check platforms and imminent departures/arrivals.	
Scope	Allow users to visualize real-time departure and arrival boards for a specific station, displaying assigned platforms and immediate train schedules.	
Level	Primary task	
Primary actor	General user	
StakeHolder & interest	StakeHolder	Interest
	User	Needs to find the correct platform and verify immediate train status.
Preconditions	→ None (the feature is accessible to anonymous users).	
Minimal Guarantees	→ The system shows the static scheduled timetable if the live feed from the station fails.	
Success Guarantees	→ The user views a continuously updated, accurate list of trains arriving and departing at the selected station.	
Trigger	The user navigates to the "Station Boards" section and selects a specific station.	
Description (Main Success Scenario)	Step	Action
	1	User selects a station from the list or map.
	2	System requests the current live board data from the Train Management System.
	3	System displays a chronological list of departures and arrivals, including times, train IDs, destinations, and assigned platforms.
	4	System auto-refreshes the data periodically (e.g., every minute).
Extension	Step	Other action
	2a	<i>The station has no scheduled trains for the next few hours (e.g., deep night).</i>
	2a ₁	System displays a "No upcoming trains scheduled at this time" message.
Technology & data Variations	Data must accurately reflect the real-world physical displays at the station.
