

Use case	Ticket management	
Release (id)	UC-09, v1.0, 7 May 2026	
Context of Use	A registered user changed his plans and needs to modify a ticket they have already purchased.	
Scope	Allow the registered user to modify a purchased ticket.	
Level	Primary Task	
Primary actor	Registered user	
StakeHolder & interest	StakeHolder	Interest
	Registered user	Wants possibility to change travel date/time and train,
	Train Operator	Needs to manage seat occupancy and ensure the changes follow specific policy.
Preconditions	→ The user is already authenticated (UC2) → The user has an active, purchased ticket (FR13)	
Minimal Guarantees	→ The original ticket remains valid if the modification process fails	
Success Guarantees	→ The ticket is updated with the new date/time, and inventory is adjusted accordingly	
Trigger	Registered user selects “Modify Ticket” option from their active tickets view.	
Description (Main Success Scenario)	Step	Action
	1	User selects the ticket they wish to modify
	2	System calculate the time remaining until the original departure
	3	If >24 hours remains: System allows user to select a new date and time
	4	User selects new travel details and confirms the change
	5	System updates the ticket and sends a confirmation to the user
Extension	Step	Other action
	3a	If <24 hours remains: System restricts modification only to time (not the date)
	3b	If ticket is already expired: System prevents modification and informs the user the departure time has passed
	4a	If user selects a time/date that is fully booked: System tells user to choose a different slot
Technology & data Variations	Time calculation: System must perform CurrentTime vs DepartureTime to determine if the 24-hour threshold has been crossed. Business Rules: Modification rules follow NFR 23 (likely governing fees or specific constraints for last-minute changes).
